

Keeping your mouth smiling.

2014 ESSENTIAL PEDIATRIC DENTAL BENEFITS

Maintaining oral health is important to your overall health.

New in 2014, as a part of your medical benefits, all children up to the age of 19 are eligible for dental care benefits.

Regular dental care is essential for children to ensure that they are ready to learn in school. Every year children miss millions of hours from school due to dental issues - persisting pain and inability to sleep.

Children should see the dentist from the first year of life, with check-ups and cleanings every six months.
